

# SOLAR PERGOLA

## SOLAR PERGOLA

UP to 1,5kW

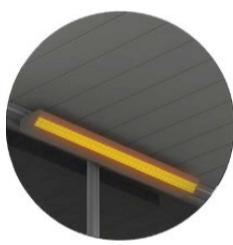

The solar pergola is one of the most advanced solutions on the market. The world's first pergola with photovoltaic panels integrated into the roof slats, it can produce up to 1.5 kW of energy to power additional functionalities such as automatic blinds, speakers, IR heater or can serve as a charging socket for mobile devices. The solar pergola is also an excellent extension for a home photovoltaic installation. By installing a solar pergola, you can significantly reduce your electricity bills

integrated photovoltaics

Integrated speakers

Integrated IR heater

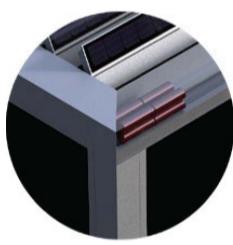

Sealed blades

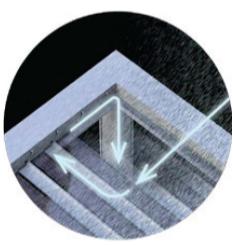

Integrated LED lighting

Integrated ZIP screens

Integrated batteries

Drainage system

## Premium class bioclimatic pergola with photovoltaics inblades

This is a modern bioclimatic aluminum pergola that combines functionality with innovative technology. Thanks to the photovoltaic panels integrated into the roof, it not only provides protection from the sun and rain, but also produces electricity. Adjustable slats allow you to control the flow of light and air, creating a comfortable space all year round.
